DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 12, 2007 has been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 11 is rejected under 35 U.S.C. 102(e) as being anticipated by Ohnuki (U.S. Patent No. 6,652,298). With respect to claim 11, Ohnuki discloses (in Fig. 2) a connector arrangement comprising: a first housing (3) having a first contact (2) and a

bearing sleeve (14), wherein the bearing sleeve is open in the direction opposite to the direction of plugging; a second housing (5) having a complementary second mating contact (inside 5); a cross slider (9) disposed between the first housing and the second housing, wherein the cross slider comprises a slot (between both 9) open in the direction opposite to the direction of plugging; and a lever (10) having a bearing tab (10c) and a guide tab (10d), wherein the bearing tab is configured to be received by the bearing sleeve when the bearing tab is inserted into the bearing sleeve in the direction of plugging, and wherein the guide tab is configured to be insertable into, the slot in the direction of plugging.

Allowable Subject Matter

4. Claims 1-10 are allowed for the reasons stated in the Office Action of November 21, 2006.
5. Claim 12 is allowed.

The references fail to teach, disclose, or suggest, either alone or in combination, a spring arm, the bearing sleeve being open to the back side of the first housing, and wherein a free end of the spring arm extends to a side of the bearing sleeve and in combination with the rest of the limitations of the base claim.

Response to Arguments

6. Applicant's arguments with respect to claims 11-12 have been considered but are moot in view of the new ground(s) of rejection.
